PLANEX BUILD Ltd.
ENVIRONMENTAL PROTECTION POLICY

The Management of Planex Build Ltd is very conscious of its responsibility for developing a successful business with care for the environment and human health.

We adopt the following principles:

1. Establishing and maintaining a stable environment protection system in order to minimize the harmful effects from activities of the company.

2. Integration and maintenance of environmental friendly requirements in all stages the activities of the company, if possible exceeding those required by law.

Observing these principles we seek:

- To focus our activity on reduction and prevention of the risks to human health and the environment from pollution and damage.
- To identify and analyze possible sources of danger
- To assess risks and establish preventive measures for elimination and / or reduction the impact of risk factors that could cause harmful effects on the environment, up to the estimate goal - working without environmental incidents, accidents and illnesses.
- To set objectives related to environmental impact in the early process of making business decisions and provide the necessary financial resources for their realization.
- To carry out systematic monitoring of input materials and products;
- To develop, implement and manifacture products with the least possible negative impact on the environment and human health.
- To use modern technologies and equipment, allowing the creation of safe workplaces and stable ecological balance.
- To reduce waste and improve the control over input materials and energy.
- To provide information, instructions and training of the measures on environmental protection to all employees.
- To review periodically the policy on reducing environmental pollution and make it available to all interested parties.

This policy is notified to all employees of the company. Everybody working in/or for the company, within the limits of their professional competence, are required to carry out their responsibilities for environmental protection and inform the relevant management of any discrepancy found.
